Description

Stay dry and protected without compromising on comfort. These multi-standard rain pants are specially designed to be worn comfortably over work pants and combine high visibility, flame-retardant properties, and weather protection in one practical solution.

The combination of EN 343 Class 4/4, breathability, and mechanical stretch ensures that moisture is kept out while excess heat can escape. This allows you to work comfortably, even during intensive activities. With APC 1 protection against the thermal hazards of an electric arc and certification to seven safety standards, these rain pants are a reliable choice for professionals working in wet conditions and high-risk environments. As part of the Multi Protector+ Advanced Layering System, the pants integrate seamlessly with the other garments in the collection.

Characteristics

- Elastic waistband with drawstring for adjustment
- Segmented reflective tape
